

We are an Italian industry with more than 40 years of experience in formulation and production of high-quality and digestible feed, unique in shape and characteristics.

We carry out continuous animal's nutrition research, collaborating with leading institutes, ensuring that our feeds are always the most innovative and efficient, thus satisfying the needs of farms.

We offer a full range of products, from conventional to organic and non-GMO feeds, based on precision nutrition. We study the ideal and specific nutrition for various animal species including ruminants that have always been our core business, but also pigs and horses.

We select only the safest, most reliable and superior quality harvest. To provide a quality, certificated and environmental friendly consumption, we stipulate also cultivation contracts and choose only the varieties that meet animal's nutritional needs. The raw materials pass through a very rigid lab control before being processed by our exclusive industrial production technologies.
